

Digital Signals Insights Platform

KPMG Digital Signals Insights Platform helps organizations proactively manage threats emanating from their own, as well as their supplier's/affiliate's digital assets.

Cyber Risk Insights

KPMG Digital Signals Insights Platform enables you to:

- Identify digital assets which are owned by your brand on the internet and understand your digital footprint coverage
- Provide contextual threat intelligence on domains, sub-domains and website security posture
- Detect and monitor mentions on darkweb

Social Media Risk Insights

The platform performs advanced analytics on the data available on digital media, highlights and reports the risks to organization, in the form of insights, and performs audits on the brand's social media presence, which allows for a transformation of the organization's social media strategy.

Supplier Risk Insights

The platform lets you automate due diligence following a structured approach, which involves the facilitation of background checks, watch-list screening, beneficial ownership checks, sanctions and regulatory checks etc.

Data Leakage

KPMG Digital Signals Insights Platform can analyze the presence of sensitive documents and intellectual property such as code, email and credentials on the internet and alternative channels.

Geo Specific Market Intelligence

Equipped with a country risk profiling, the platform identifies location-specific risks, evaluates suppliers and grades them based on their level of risk exposure in that geo location for a given service or product.

Risk Quantification and Industry Contextualization

The platform has an in-built industry context that identifies threats relevant to a given industry and the Analytics engine quantifies these risks and their implications.
